

I agree with the ARRL petition for the fact that will let all amateurs be able to use the hf band and get familiar with the same. Been able to participate in traffic, emergency, and training net or programs on the band is a good exercise in case there is a local or national emergency. Perhaps in a big city there are plenty of operators to fill the roll but in a small or isolated towns that may not be the case. As a 12+ year ham trying to be able to learn cw and not been able to recieved it, it hamper me the privilege of using, participating and enjoying the hf band. I can send cw but copying is hard for me to accomplished. Not been able to access the hf band also is not letting me practice to be able to master the code. Therefor I think is a good idea for the restructuring of ther licensing system.
